

PBA-600LD & PBA-860LD LED Illuminated Micro Switch Bar Instruction Manual

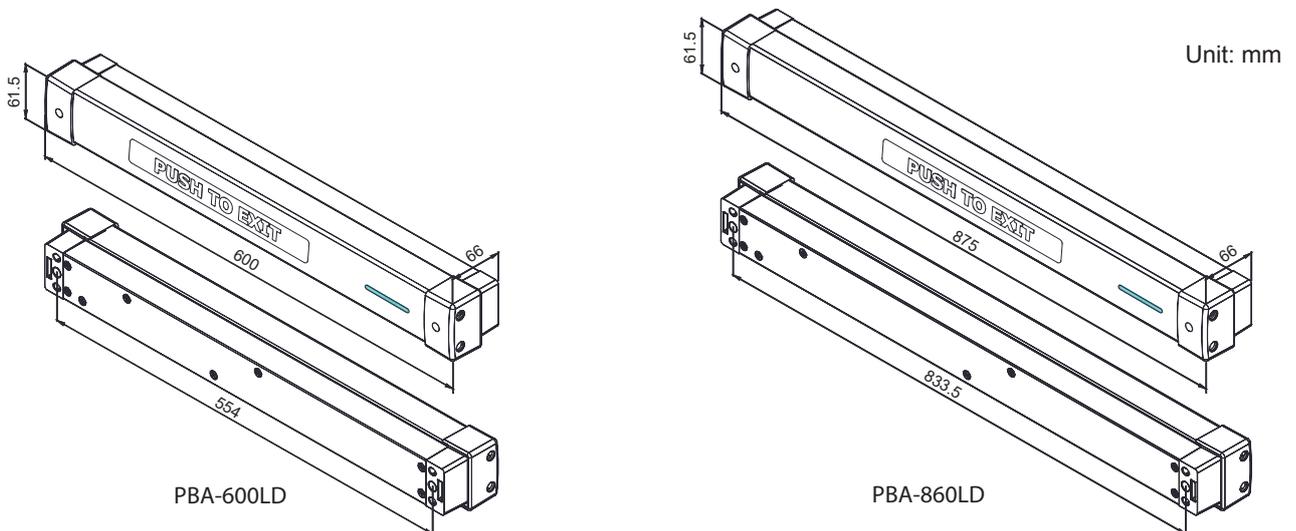

The PBA-600LD & PBA-860LD Micro Switch Bar is designed for emergency exit doors and other large-scale outswing doors. When the bar is depressed, or if access is granted by control device, the micro switch is activated to release the door. The dual-colour LED illumination design also allows people to locate the push bar in the dark quickly and easily.

The PBA-600LD & PBA-860LD features additional terminals including dry or wet input (from control device such as keypad or reader to change status of the LED illumination), a REX output (dry contact for direct control of electric locks) and LED indicator setting.

| Models | PBA-600LD | PBA-860LD |
|---------------------------|--|------------------------|
| Dimensions | 600(L)x66(W)x61.5mm(D) | 875(L)x66(W)x61.5mm(D) |
| Current Draw | Activated 150mA/12VDC; Standby 25mA/12VDC Activated 350mA/24VDC; Standby 40mA/24VDC | |
| Wet Contact Input Voltage | 12/24VDC | |
| Relay Rating | 5A/125VAC | |
| Finish | Clear anodized | |
| Operating Voltage | 12/24VDC | |
| LED Illumination | Green & Red | |

PBA-600LD & PBA-860LD Wiring Diagrams:

Caution:

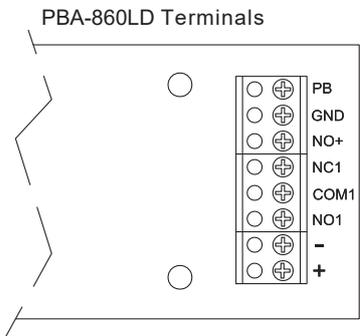

Please ensure the dry (PB,GND) or wet (GND, NO+) contacts are connected correctly. Passing voltage through dry contacts will cause the PCB to burnout and this will not be covered by the warranty.

CAUTION
Incorrect wiring of dry or wet contacts will cause the PCB to burnout.

Power Input (12/24 VDC)

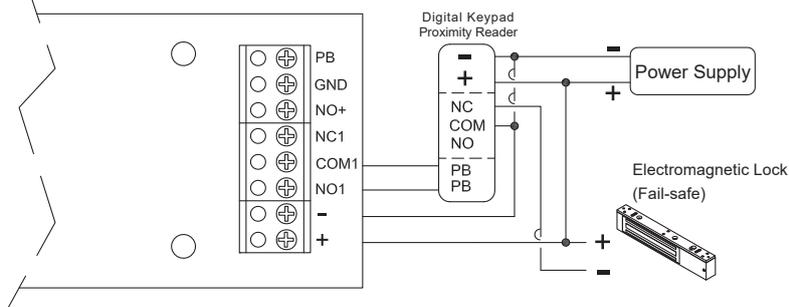

PBA-860LD to directly control fail-safe locks.

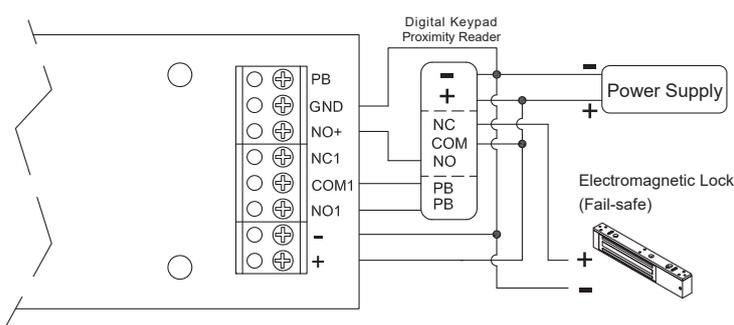

PBA-860LD to directly control fail-secure locks.

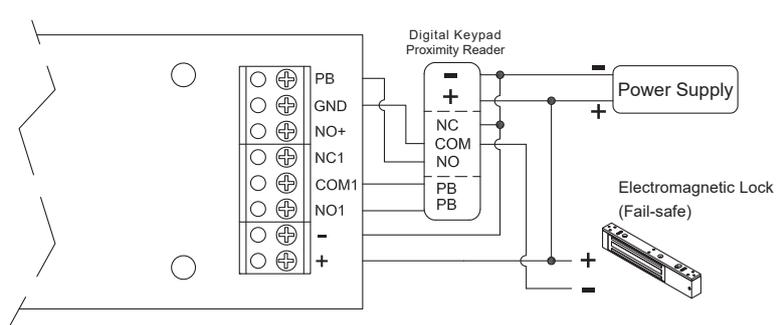

Connect to the push button terminal of the digital keypad or proximity reader.

Using the output from digital keypad/proximity reader to control PBA-860LD (Wet Contact).

Using the output from digital keypad/proximity reader to control PBA-860LD (Dry Contact).

LED Indicator Setting

This setting indicates the LED is RED when on standby and will switch to Green when the bar is depressed.

This setting indicates the LED is GREEN when on standby and will switch to Red when the bar is depressed.

Place the jumper across the pins horizontally, not vertically.
